1 Simple Statistical Formula

Conditional probability:

$$P(w_i \mid w_{i-1}) = \frac{C(w_{i-1}, w_i)}{C(w_{i-1})} \tag{1}$$

Precision and Recall:

$$\text{Precision} = \frac{TP}{TP + FP}$$
$$\text{Recall} = \frac{TP}{TP + FN}$$

2 Linguistic Example with Gloss

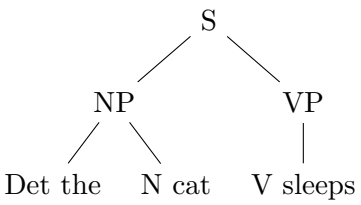

With `csquotes`, write `\enquote{...}` and let LaTeX pick the right quotation marks for the current language: “So she said.”

(1) Elle a mangé une pomme.
She has eaten an apple.
‘She ate an apple.’

3 IPA Example

English “time”: [aɪ]
French pain: [pɛ̃]

4 Simple Syntax Tree

5 Multilingual Text

English text. Voici un exemple en français. Aquí un ejemplo en español. Ecco un esempio in italiano.

6 Technical Notes

If you prefer to avoid `\noautomath` entirely, there are two modern paths:

- Drop `tipa`/`tipauni` and type IPA characters directly as Unicode, with a font that covers them (Charis SIL, Doulos SIL, Noto Sans).
- Switch from `gb4e` to `expex` or `linguex`, both of which have fewer conflicts with other packages.

For now, `tipauni` + `gb4e` + `\noautomath` is a perfectly fine and widely used combination.
